Summary

Goals

Design a template system built of components to create consistency and efficiency throughout the site.

Background and Strategic Fit

Create a better shopping experience that is in line with current industry standards and web trends.

Definitions

Component - A feature that is accessible in the Admin.

Reusable - On page components that are made up of assets, which are created and referenced in the Asset Manager.

Straight to Page - On page components that are created directly within in a template.

Element - A feature that is hardcoded on the site.

If a feature is inaccessible through the Admin, it is considered an Element: ie. Forms, Saved Address Cards

Form Accessibility - Guidelines for form field functionality and accessibility standards.

Includes inline notification messaging, keyboard navigation, and form field labeling.

Notification Strategy - Guidelines for global notifications for forms and products.

Includes inline notifications, page level notifications, and alert messaging in checkout, on PDP, and line items.

Interaction Glossary - A breakdown of all interaction states for components and elements.

Includes requirements on Disabled, Enabled, Hover, and Active states.

Includes requirements on Transition times and styles.

InVision Comps

A google doc that outlines the Redline comps and provides access to the InVision links:
